

SURGICAL EQUIPMENT

Electrosurgical Units

Monopolar and bipolar diathermy generators for cutting, coagulation and vessel sealing. Units feature isolated outputs, tissue-response power regulation and continuous return-electrode monitoring for patient safety. Supplied with pencils, cables, plates and a mobile trolley.

Highlights

- Monopolar & bipolar outputs
- Return electrode monitoring
- Tissue-sensing power control
- Foot and hand control

Applications

General surgery • Gynecology & urology • Endoscopic procedures

Products in this range

Electrosurgical Unit 400 W — Erbe (ESU-400)

High-frequency diathermy generator with monopolar cut, coagulation and bipolar modes.

Bipolar Vessel Sealing System — Erbe (VS-200)

Vessel sealing generator with reusable and single-use sealing forceps for vessels up to 7 mm.
