

SURGICAL EQUIPMENT

Neurosurgery Instruments

Microsurgical instruments engineered for cranial and spinal procedures where millimetre control matters. Range includes micro scissors and forceps, dural hooks, Kerrison punches, brain retractors and craniotomy sets. Instruments are balanced for extended microscope-assisted operating.

Highlights

- Micro-tip precision engineering
- Bayonet-style shafts for scope work
- Titanium instrument options
- Protective sterilization trays

Applications

Craniotomy • Spine & disc surgery • Microvascular procedures

Products in this range

Micro Neurosurgery Set — Aesculap (NS-MIC-24)

Bayonet micro forceps, scissors and dissectors for microscope-assisted neurosurgery.

Craniotomy Instrument Set — Aesculap (NS-CRA-30)

Perforators, burr hole instruments, dural hooks and Kerrison punches for craniotomy access.
