

SURGICAL EQUIPMENT

Orthopedic Instruments

Heavy-duty instrumentation for fracture fixation, arthroplasty and spine procedures. Includes bone-holding forceps, osteotomes, reamers, rongeurs and implant-specific instrument trays. Instruments are hardened for repeated contact with cortical bone and implants.

Highlights

- Hardened cutting edges
- Implant-matched trays
- Radiolucent handle options
- Silicone instrument mats

Applications

Trauma & fracture fixation • Joint replacement • Spine surgery
